Mumbai, India | +91-9511650456 | pratikjivanjadhav77@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data Engineer with 1+ year of experience building production ETL pipelines, medallion architecture, and analytics infrastructure. At Nuvo Aeon, engineered automated data pipelines from scratch, caught a critical ERP payroll bug saving ₹5L/month, and reduced manual reporting by 40%. Portfolio includes a Databricks medallion architecture pipeline (PySpark, Delta Lake), a dbt SaaS analytics project (PostgreSQL, layered transformation), and a Stock Market Data Lakehouse (Alpha Vantage API, Delta MERGE). Ready to contribute immediately to data engineering teams building scalable data products.

TECHNICAL SKILLS

Data Engineering: Python (PySpark, Pandas), SQL, ETL/ELT, Delta Lake, Spark SQL, Apache Spark, dbt, Airflow (basic), Schema Design, Data Modeling (Star Schema, Medallion Architecture)

Cloud & Platforms: Databricks, AWS (EC2, SageMaker), Docker, Git/GitHub, REST APIs

Analytics & BI: Power BI (DAX, Semantic Layer), Metabase, Excel

ML (supporting): Scikit-learn, XGBoost, Time Series Forecasting

PROFESSIONAL EXPERIENCE

Data Engineer | Nuvo Aeon Diamond & Jewellery LLP · Mumbai

Feb 2025 – Present

- Identified and resolved critical ERP payroll calculation bug causing ₹5L/month financial loss — a data quality and business impact win
- Built end-to-end ETL pipelines from scratch ingesting, transforming, and loading sales and inventory data from ERP into analytics layer
- Designed automated Power BI dashboards (sales velocity, stock turnover, inventory aging KPIs), cutting manual reporting time by 40% and improving stock management efficiency by 25%
- Served as technical advisor on two internal software development projects; translated business requirements into technical data specifications

Data Analyst Intern | TCS ION · Mumbai

Jun 2022 – Dec 2022

- Conducted EDA on large datasets to surface trends and anomalies; built SQL-driven dashboards for stakeholder reporting
- Performed data wrangling, cleaning, and transformation workflows to prepare raw data for analytical consumption

KEY PROJECTS

Databricks Medallion Architecture Pipeline

Jan 2026 – Feb 2026

Tech: PySpark, Delta Lake, Databricks, Spark SQL, Power BI (DAX), Star Schema

- Architected Bronze → Silver → Gold medallion pipeline for sales transaction data; designed star schema with fact/dimension tables following dimensional modeling best practices
- Built Power BI semantic layer with DAX measures for net revenue, refund adjustments, and time-based comparisons; executive KPI dashboards with drill-down

dbt SaaS Analytics (PostgreSQL)

2026

Tech: dbt, PostgreSQL, SQL, layered transformation architecture

- Built layered dbt transformation architecture (staging → intermediate → marts) for a SaaS analytics use case with business metrics and data quality tests

Stock Market Data Lakehouse

2026

Tech: Python, Alpha Vantage API, Delta Lake, Delta MERGE, SQL window functions

- Ingested live stock data via Alpha Vantage API into a Delta Lake lakehouse; implemented upsert logic with Delta MERGE and analytical queries using SQL window functions

EDUCATION

B.E. in Information Technology · University of Mumbai (Finolex Academy)

CGPA: 7.45 | 2019–2023

CERTIFICATIONS & OPEN SOURCE

Data Science & Analytics Bootcamp – Cloudy ML (2023–24) | **Generative AI with LLMs** – DeepLearning.AI (2024) | **Deep Learning** – NVIDIA (2022)

Open Source: Published technical documentation on Adam Optimizer for neural network training on Codecademy (merged & live)
